## SEROLOGY

### TEST NAME

### RESULTS

### BIOLOGICAL REFERENCE INTERVALS

### DENGUE NS1 ANTIGEN

Dengue NS1 Ag

**REACTIVE**

### Interpretation

This is rapid solid phase immuno-chromatographic test for the qualitative detection of dengue NS1 antigen and differential detection of IgM & IgG antibodies to dengue virus in human serum/plasma. Serological cross reactivity across flavivirus group is common. Presence of heterophile antibodies in patient's sample with Rheumatic diseases and autoimmune disorders may lead to false results. This is only screening test, therefore isolation of virus, antigen detection in fixed tissues, RT-PCR and serological tests like haemagglutination inhibition test may be used as a confirmatory tests.
