Dengue IgM Method: Immunochromatography	: NEGATIVE	
Dengue IGG AND IGM		
Dengue IgG Method: Rapid Elisa	: NON-REACTIVE	
Dengue IgM Method: Rapid Elisa	: NON-REACTIVE	

Interpretation

This is rapid solid phase immunochromatographic test for the qualitative detection of dengue NS1 antigen and differential detection of IgM & IgG antibodies to dengue virus in human serum/plasma. Serological cross reactivity across flavivirus species is common. Presence of heterophile antibodies in patient's sample with Rheumatic diseases and autoimmune disorders may lead to false results. This is only screening test, therefore isolation of virus, antigen detection in fixed tissues, RT-PCR and other serological tests like haemagglutination inhibition test may be used as a confirmatory tests.
